Hey Everyone, We've been having such a headache with DFS shares in El Capitan recently.. 7, was able to use the DFS namespace on Mac computers (not banished to picking a single server, like 10.. DFS has two components to its service: Location transparency (via the namespace component) and Redundancy (via the file replication component).. I've clean slated many a machine (not a fan of upgrades), and yes, starting like 10.. This hadn't (to the best of my knowledge) been an issue in previous versions of OSX. [Karaoke Player For Mac](#)
